

# AccessIT™

- **Integrates in-band and out-of-band access**
- **Combines access and power**
- **Manages access & control of heterogeneous environments**
- **Maximizes tools that have already been deployed**
- **Overcomes implementation challenges**
- **Increases operational efficiency while maintaining security**
- **3 year warranty**

## **Centralized Remote Access Management of all IT Assets**

### **Solving the need to manage remote access**

In today's complex corporate IT environments, IT managers are charged with managing remote server rooms and distributed IT assets at a "clicks" length" so that every problem is dealt in real-time, or even better, prevented through ongoing maintenance. This calls for a secure, simple yet cost-effective solution to manage the ever-growing list of remote access connections and protocols used by the IT administrator and his staff.

### **Enhancing the level of IT service**

AccessIT is a secure web-based, centralized remote access management solution that enhances IT efficiency and productivity in organizations. AccessIT consolidates all remote access services into a single session, thus providing the IT staff with critical on-demand remote access to all IT assets, regardless of their physical location

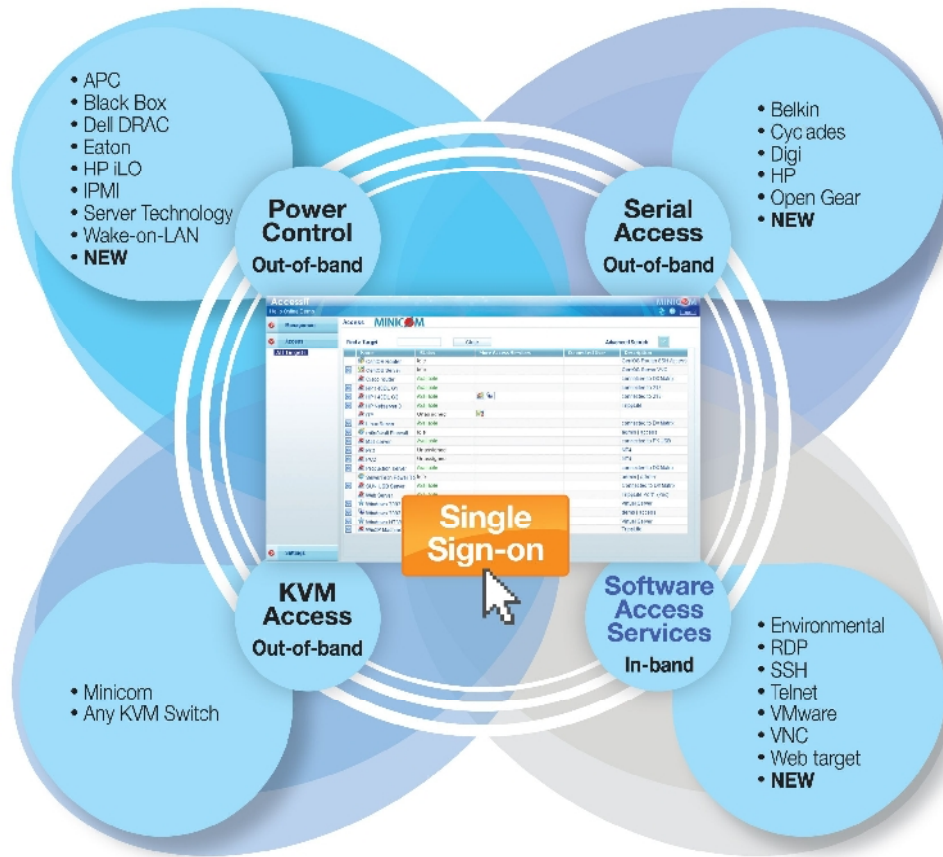

AccessIT is targeted at mid-sized organizations with up to 250 servers and network devices, and with less than 10 IT personnel that are in charge of the daily management, maintenance, monitoring and control of the company's mission critical IT assets. AccessIT Enterprise Edition is designed for larger organizations, and can accommodate more than 250 servers and network devices and more than 10 users. The organization can be in one or more locations (HQ + branch offices).

### **Providing the Real Needs™ of IT**

Minicom's unique, open platform architecture provides a single portal to access and control ALL IT hardware (including servers, console servers, PDUs, and network devices) regardless of manufacturer, providing significant cost savings for past and future investments. By embracing IT products from a wide range of vendors, AccessIT enables organizations to leverage their existing IT equipment, knowledge, and training.

AccessIT supports a wide range of vendors of PDUs, such as APC, Black Box, CyberSwitching, Geist, Dell, Eaton, HP, and Server Technology, and a large selection of vendors of console servers, such as Cyclades (Avocent), Digi International, Aten, Perle Systems Limited, and OpenGear. AccessIT also supports industry-leading, in-band and out-of-band remote access services, including: RDP, VNC, VMWare, SSH, Telnet, HP iLO, KVM IP, and any proprietary web-based or customized applications.

AccessIT™ Diagram

Technical Specifications

Protocols	HTTPS, XML, SSH
Client web browser	Internet Explorer 6 and higher , Firefox 3
Authentication	Local or Microsoft A.D (active directory)
Security	High grade encrypted AES-128.128 bit
Number of users	10 for AccessIT more than 10 for AccessIT enterprise
Number of targets	250 for AccessIT more than 250 for AccessIT enterprise
Replication unit	Yes
Backup / Restore	Yes
New device configuration	Automatic discovery of new devices
Firmware upgrade	Yes
Form factor	1U x 19" rack mountable
Network connection	RJ45
Power supply	115-230 VAC, 50-60Hz autosensing
Operating temperature	0°C to 40°C
Storage temperature	-20°C to 80°C
Relative humidity	5-95%, non-condensing
Regulatory/Conformity	FCC, CE, UL
