

Date - January 15, 2003  
 Title - Classroom in Bus  
 No - 006

<b>ENVIRONMENT</b>	Mobile Computer Based Training (CBT) labs; Educational classrooms; Corporate CBT rooms
<b>MINICOM PRODUCT</b>	Classnet Twist, Smart KVM Extender
<b>CHALLENGE</b>	A corporate training consulting firm needs the ability to control every computer in a CBT lab installed in a bus that can travel to different corporate sites. The computer equipment must be stored in racks in the back of the bus.
<b>MINICOM SOLUTION</b>	Link every computer to the instructor's computer with the Classnet Twist system. The Smart KVM Extender allows the students to have only a keyboard/mouse/monitor and the Extender unit on their desks while the computers are mounted in racks in the back of the bus.
<b>BENEFITS</b>	The Classnet Twist system gives the instructor the ability to project his screen to each monitor, as well as, monitor and control each computer from one location. The Smart KVM Extender allows the students to have only a console on their desks and control the computers in the back of the bus. Trim CAT5 is used to connect the Smart KVM Extender and Receiver.
