 Title - Library Public Access Consoles
 No - 012

| | |
|-------------------------|--|
| ENVIRONMENT | Libraries; schools; Internet cafes; public internet stations |
| MINICOM PRODUCT | Smart KVM Extender |
| CHALLENGE | A municipal library has several computer stations for public use. The computer stations have to be in a public area but the computers have to be in a separate location to prevent hardware tampering. |
| MINICOM SOLUTION | Use the Smart KVM Extender to allow the computer users to be in the public area and have the computers stored in a secure location in a back room. |
| BENEFITS | The computers can be 360ft. from the workstations and only a single trim CAT5 cable is needed to extend the workstation. The small form factor of the Extender reduces clutter on the workstation desks. |
