

Application

Title: Additional KVM Switches support for Smart IP Access and IP Control

No: 200705-02

Contact: mtu@minicom.com

Summary: If your KVM switch is not listed in the built in Smart IP Access or IP Control KVM switch list, you can follow these instruction to download the Switch Definition File for your KVM Switch Model

More Information

On our support web site you may find additional Switch Definition Files for KVM switches which are not listed in the default list of the IP Access and IP Control units.

Browse to the following URL: <http://www.minicom.com/phandlj.htm> and click on your KVM switch manufacturer from the list.

1. Download your KVM Switch Definition file, unzip its content and save to your local Hard drive.
2. Log into the configuration page of the IP Access or IP Control (<https://xxx.xxx.xxx.xxx/config>) (where xxx.xxx.. is the network address of your IP Access or IP Control unit)
3. From the menu click “Switch Configuration” and press “Browse” in the ‘Install Switch Definition File’ section

Picture: Switch Configuration tab

4. Select the .RPC file you unzipped and click “Import SDF”

Once this process is done successfully you will be able to select your KVM switch model from the new list.

Notes:

If your Switch Manufacturer or Model are not listed, please contact Minicom Technical Support team at the following email address: support@minicom.com
